## Yacht Trailers

### Hydrotrans G2-series

The Hydrotrans G2-series is available in capacities from 2,5 tons upwards. The G2 is towed, this means it needs to be linked to a vehicle which pulls the trailer and provide the power for the hydraulics. The trailer can be fully controlled from the towing vehicle with a control panel. It is very easy to link the trailer to the vehicle: Two latches for hydraulics and a connector provide all the power.

### Hydrotrans G4-series

The Hydrotrans G4-series is a version with four-wheel steering. The front and back wheels are individually steerable, which makes the trailer very manoeuvrable. This trailer is also deliverable with a capacity of 2,5 tons upwards. The link with the towing vehicle is the same as the G2-series. The G4 as well as the G2-series are available with width adjustment. If different sizes boat supports are used the trailer can be adjusted to the necessary width.

### Hydrotrans RM-series

The Hydrotrans RM-series are self-powered. On the side of the trailer a power source is placed which provides power for the hydraulics. On the individual wheels hydro-engines are placed to provide the propulsion. The propulsion is also protected and hidden to give the trailer a clean look, but more important: It is safer. The trailer is remote controlled and available from 20 tons upward.
