

NAUTICAL DECKING

Esthec[®]

ESTHEC® IS NOT AN ALTERNATIVE

IT IS THE SOLUTION

I N N O V A T I O N S T A R T S F R O M T R A D I T I O N

Esthec®'s roots go back to the beginning when the factory, in the Netherlands, began developing composites with a vision of replacing the use of timber, steel and tar 50 years ago. Since those days, the composite materials have been used on hundreds of cruise ships, superyachts as well as in a variety of hospitality, high-end residential and stunning commercial applications.

The company partners with naval architects, designers and shipyards worldwide for their prestigious and visionary projects. Esthec® builds on these same groundbreaking, tested and proven properties adding a natural look and feel.

From imagination to realisation...

With an eye always towards the future, Esthec®

invested and continuously invests in the most advanced technology applied to its endless applications. With this intention an Innovation Centre, unique in Europe, has been developed in order to let you not only imagine, but "experience" Esthec®'s limitless opportunities.

"Be safe, it's Dutch"

“There is no expiration date for Esthec”

Esthec® is a strong and solid material that consists of natural components, fibres, colour pigments and fillers, neither plastic nor wood!

It is an innovation based on the yachting industry's need for ecologically sound construction materials. Teak is becoming more and more scarce and very difficult to find in good quality and in compliance with the current regulations protecting against deforestation.

Esthec® is a thermoset product, different from all the others on the market that are thermoplastic products (PVC-based) meaning that the expansion coefficient of Esthec® is extremely low. For a 3 m sheet, expansion is less than 1 mm, given a temperature difference of 25 °C. This allows the product to be extremely resistant in high thermal excursion conditions as well as offering hassle-free cruising, even in the most severe weather conditions in the world.

A D E C K I S M O R E T H A N J U S T A C O V E R

With Esthec®, a deck can be much more than just a cover for your yacht, giving you the opportunity to have something exclusive and recognisable as unique!

Reflecting Esthec®'s no Limits mentality, the possibilities in design are limitless. Any pattern, logo or text can be integrated as a unique feature in the deck. So let your imagination run wild.

"We were impressed by how much freedom there is on developing a style that matches the boat design"

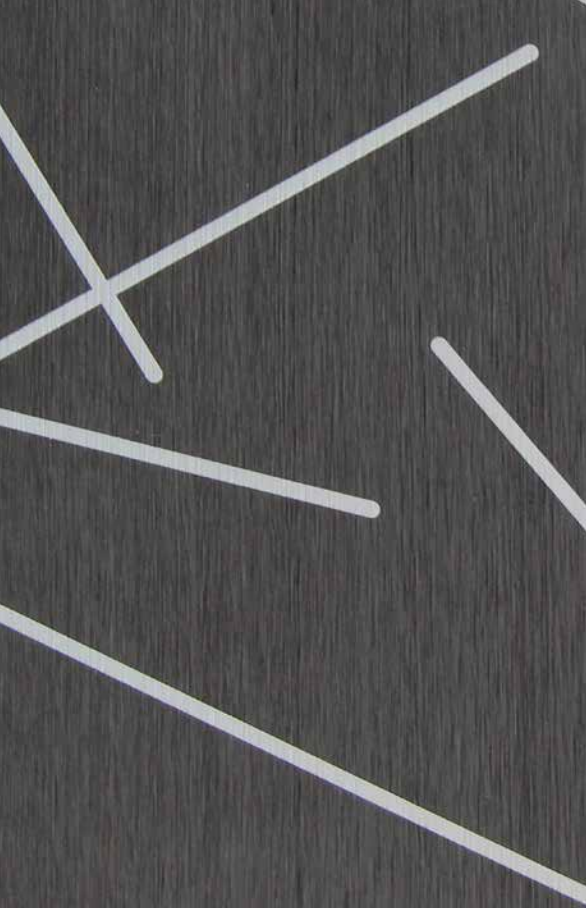

EASY TO MAINTAIN

Esthec® is not only stylish, but very easy to maintain as well. Low maintenance requirements can be of overriding importance, especially for charter yachts where foods and wine can be a disaster for a deck or for some technical areas where oils, chemicals and other aggressive products are used.

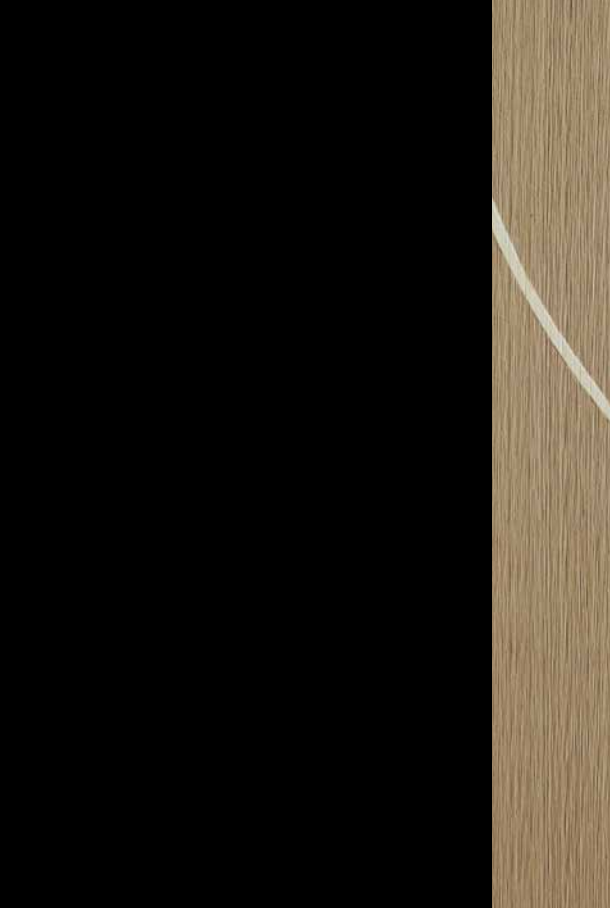

Hot water and a hard brush are enough! This allows you to fully enjoy your yacht without any worries.

The deck, gangway, stairs, cap rails, grating as well as special details can be made out of Esthec®.

Freedom means NO LIMITS

NO LIMITS means Esthec®

Esthec® is suitable for new-built and refits of mega yachts, displacement yachts, sailing boats, motor boats, pursuit boats, tenders and ribs. Due to its light weight property, it is especially perfect for high performance yachts where weight can be crucial in reaching a certain speed value. For new builds, the decks are supplied fully

customised. In other cases, they are made to be measured by the shipyard. The prefab process shortens the total production time considerably and therefore also the delivery time of your boat!

Top designers around the world have already integrated Esthec® into their designs.

Esthec® can be used on both custom-built boats and in (semi-)serial building. With more than 50 years of experience, the staff of Esthec® knows how to find the right solution for each project. In close collaboration with designers and shipyards, it is possible to give a series-built boat the appearance of a custom build.

COOLER THAN EVER

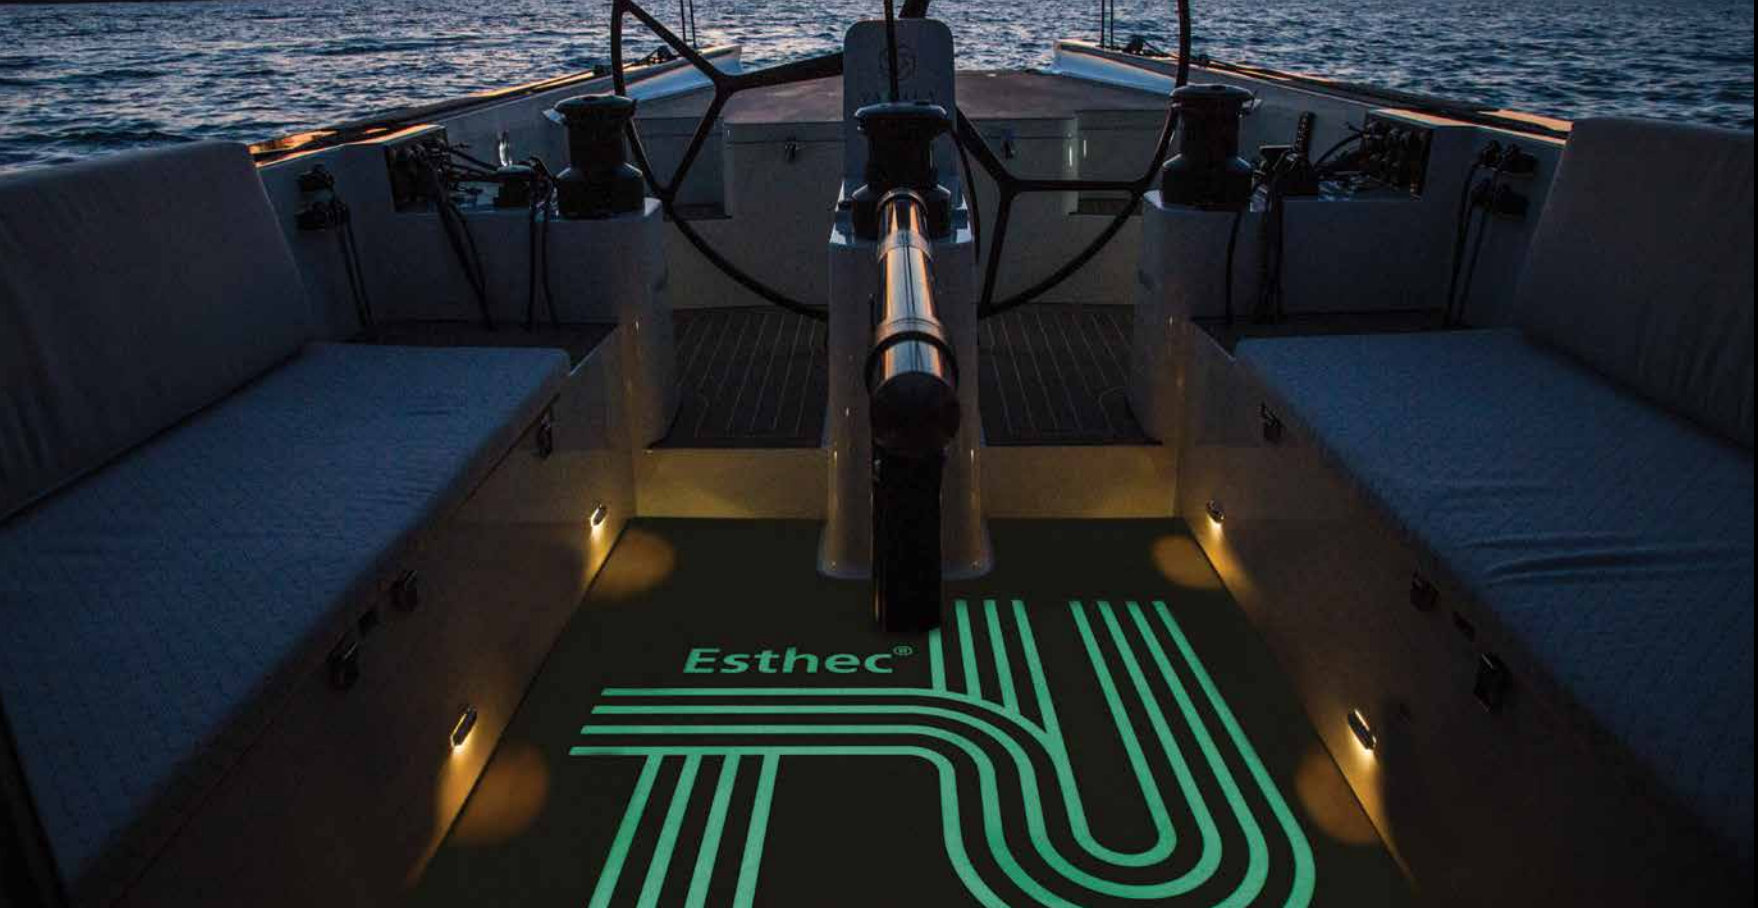

A growing number of architects are inspired by the aesthetic and technical properties of Esthec®. But there is more to it than meets the eye. Research and development are at the heart of the company's mission to continuously improve the formula and the comfort for its customers.

By adding a new component it has been possible to reduce the temperature of Esthec® decking significantly, now reaching temperatures, with certain colour combinations, that are much lower than that of teak, for instance.

"Esthec is barefoot sophistication"

INNOVATION IS IN OUR DNA

“Respect the environment, be green”

Esthec® brings innovation to the world of yachtbuilding. There is a lot to be gained for shipyards by using the latest CNC techniques and also by applying Esthec® in-mould, reducing weight and a significant amount of installation time and therefore delivering efficiency and cost savings.

Esthec® is not only a revolutionary but also

a sustainable product as it is recyclable and virtually indestructible. Raw materials are carefully chosen. Issues such as use and reuse are of great importance. Minimising our environmental impact is crucial and includes making a contribution to preventing deforestation. In addition, Esthec® has a long life. Driving improvement and innovation is a continuous process.

S E C O N D L I F E

Esthec® has just created a new and fully dedicated Refit division. Partnering with the most prestigious superyacht refit yards in the Mediterranean and North Europe as well as in the US and Australia, Esthec® is now able to offer an even more prompt and efficient service wherever your yacht is.

For any enquiry regarding your yacht, please contact our experts at refit@esthec.com.

Esthec® is the preferred choice of an ever increasing number selected by owners, designers, naval architects, captains and shipyards. These are some of our references.
