INMARE guarantees products designed in Italy that encompass comfort, creativity, uniqueness and innovation. By putting Customer needs at the forefront of our minds, we can fully carry out our mission in creating products addressed to those who profoundly love and live for the sea.

INMARE FENDERS are manufactured using a special compound of E.V.A. (Ethylene Vinyl Acetate), which is nontoxic and environmentally friendly. This customized mixture is resistant to UV radiation, it's stain proof, does not scratch the hull and does not deteriorate in the marine environment, even when left for long periods in the water. All models are easy and fast to fit with a guaranteed quality assurance and performance.

INMARE MOORING SHOCK ABSORBERS are built using a patented UV stable thermoplastic compound that is designed to progressively absorb strain on a mooring line but also eliminating traditional elastic rebound. This unique technology relieves damaging stress on cleats and other mooring hardware.

All raw materials used for our products are

UV resistant harmless to the environment nontoxic

“ - You like the sea, Captain?
- Yes; I love it!
The sea is everything.
It covers seven tenths of the terrestrial globe.
Its breath is pure and healthy.
It is an immense desert, where man is never lonely, for he feels life stirring on all sides.
The sea is only the embodiment of a supernatural and wonderful existence.
It is nothing but love and emotion; it is the 'Living Infinite', as one of your poets has said. ”

Jule Verne,
Twenty thousand leagues under the sea

MOORING ACCESSORIES
BOAT FENDERS

- ▶ Innovative design
- ▶ Functionality
- ▶ Quality of materials

BOAT FENDERS

WARRANTY PERIOD
36 months from the date of purchase

▶ BOW FENDER

Bow fender

for boats up to 16 mt / 52.5 ft
elastic rope 8 mm / 0.3 in.

Bow Fender is INMARE solution to protect effectively the bow of your boat from impacts against floating docks and piers during mooring. Light and resistant, its hydrodynamic profile makes it specific for racing and small boats. Bow Fender is stain proof and does not scratch the hull. It is resistant to UV radiations and it is not subject to marine environment deterioration.

▶ BOW FENDER XL

NEW
2013

Bow fender

for boats up to 20 mt / 65.6 ft
elastic rope 8 mm / 0.3 in.

Bow Fender XL is designed to protect the bow of boats up to 20 meters, ideal to protect the hull from frequent impacts against the floating landing stage or the quay while the anchor is weighed and during head mooring. New fender composed of a special compound of E.V.A., it is non toxic, resistant against UV radiations, not subject to marine environment deterioration and does not stain the boat.

▶ STERN FENDER

NEW
2013

Stern fender

for boats up to 20 mt / 65.6 ft
elastic rope 8 mm / 0.3 in.

New fender designed to protect the stern during mooring. Light and resistant, it guarantees the maximum absorption of the most violent impacts. Its application is very fast and safe and it can be left assembled on the boat. Composed of a special compound of E.V.A., it is not subject to deterioration when exposed to UV radiations, water and salt.

▶ POSEIDONE 2.0

NEW
2013

Side fender

for boats up to 20 mt / 65.6 ft
rope 12-14 mm / 0.5-0.6 in.

Poseidone 2.0 does not have less resistant areas and it sticks to the hull assuring a gradual (and progressive) absorption of impacts. Its peculiar shape permits an easy stowage in a small amount of room. Its floating, solid and flat profile can be installed both in horizontal and vertical position. It does not roll, it maintains its stability in the point of contact between the boat and the pier. It does not need covers.

MOORING ACCESSORIES

WARRANTY PERIOD
24 months from the date of purchase

▶ M2 / M3

Dock / boat mooring shock absorber

M2 / M3 provide the floating dock with the right degree of elasticity, enhancing considerably the characteristics of endurance and resistance of the anchorage systems built with catenary curves. They avoid violent yanks by releasing the kinetic energy of the moving dock thus protecting the whole structure. The shock absorbers M2 / M3 can be used even for big yachts (from 50 to 120 tons).

▶ ARIEL

NEW
2013

Boat mooring shock absorber

The design of this new INMARE spring combines the concept of simplicity and the easiness of installation. Light, safe and resistant, it employs only the 10% of its potential to absorb the bumps that the boat has to be subject of during sea storms, protecting the mooring from the wave motion and ensuring better comfort on board. A supreme high-quality spring, resistant to UV radiations, non toxic and environmentally friendly. Ariel does not produce annoying squeaks. It is stain proof, does not scratch the hull and does not deteriorate in the marine environment, even if left for long periods in the water.

▶ NEREIDE

Boat mooring shock absorber

Mooring spring designed to assure the maximum comfort during the permanence in the harbor. Nereide combines lightness, small size and high resistance, which enables it to absorb even the most violent jerks in a progressive and smooth way. A supreme high quality spring, resistant to UV radiations, non toxic and environmentally friendly. Nereide does not produce annoying squeaks. It is stain proof, does not scratch the hull and does not deteriorate in the marine environment, even if left for long periods in the water.

▶ NEREIDE TOP LINE

Boat mooring shock absorber

Mooring spring designed to assure the maximum comfort during permanence in the harbor. Nereide strengthened even further on the junctures thanks to exclusive internal inserts.

▶ CALIPSO

Windlass winch protection

Designed for the protection of the windlass winch and recommended by the most important factories. It permits to release the winch from the anchor's traction during the mooring in the haven or the anchorage, by protecting it from jerks and sharp tractions.
