Introduction

Nanocoat International.

Nanocoat is a brand of CHEMONA Holding B.V. and is established in Voorschoten, The Netherlands.

Nanocoat International produces and distributes products that are based on Nano-technology.

These products are unique and are meant to protect surfaces.
The coatings are durable and save costs in maintenance.

Nanocoat has an own R&D department and has a network into several production plants in Europe.

Nanocoat International is a registered partner of the VVVF- trade association.

The product range of Nanocoat

Nanocoat International offers quality maintenance products for different industries. The product line is based on innovative nanotechnology specifically designed to apply easily and extend the life of surfaces/items. by making cleaning of the item easier, faster, more effective and sustainable.

General surface treatments have been around much longer but these treatments are based on silicone, oil, acrylic or Teflon, making them unfavorable.

The product range of Nanocoat is characterized by 100% Nanotechnology and can be safely used on almost all surfaces.

The different products of Nanocoat covers the surfaces with a protective barrier which prevents the surfaces from becoming tarnished and rejuvenates old, weathered surfaces. It lasts significantly longer, making the surface require less treatment and is easier to clean.

Products

The coatings are specific developed for different surfaces. Depending the porosity of the material, it is essential that a different product is used to get a maximum result.

(Painted) items that can be treated with Nanocoat products;

- Metal
- Plastics
- Wood
- Stone
- Textile
- Polyester
- Glass

USP's

- Specialized products for each surface / item
- Easy to apply & clean
- Reduces maintenance, time and costs
- Optimizes hygiene
- Reduces labour costs compared to traditional systems (painting & cleaning)
- Products have years of active operation on the surfaces (durability)
- Environmentally friendly
- Easy to remove

Sales Strategy

Nanocoat International sells to importers worldwide.
The importers sell the products to several distributors in the following segments;

- Automotive Market
- Marine Market
- Industrial Market
- Renewables Market
- Cleaning Market
- Food & Beverage Market
- Aviation Market
- Real Estate Market

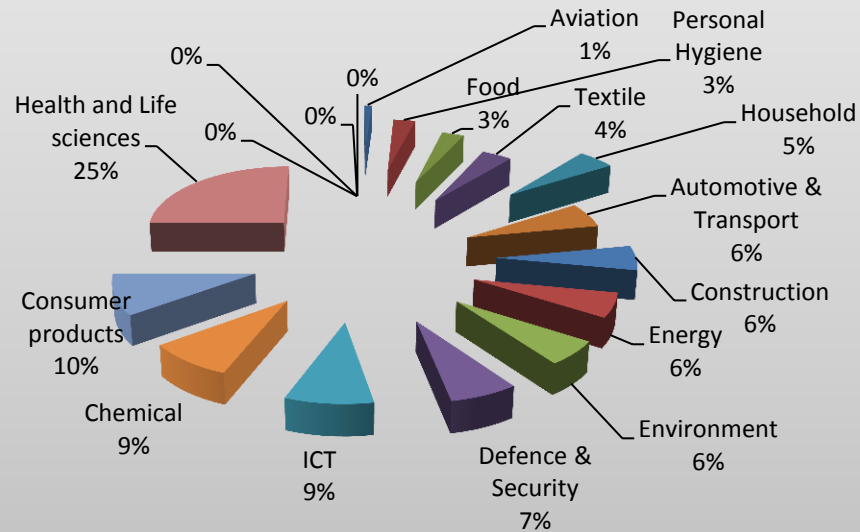

The products will be sold into the Consumer market (resale) as well as Business to Business (wholesale).

In collaboration with local distributors, Nanocoat consumer products are also available in our own web shop (www.nanocoatshop.com).

In the coming years Nanocoat International will expand their worldwide importer/distributor network.

NANO WORLD

Nano market

What is Nanotechnology?

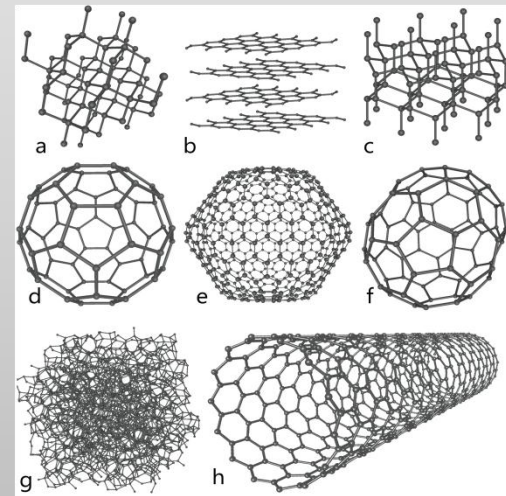

Nano comes from the Greek word 'nanos', which means dwarf.

Nanotechnology makes it possible to work on the level of molecules and atoms. One nanometer is one billionth meter, or 0.000000001 m. for example, a red blood cell is 7000 nanometers in size.

A human hair is about 80,000 nanometers thick.

Key elements for nano coatings are:

- Finest coating technology
- Molecular structure
- Suitable for many surfaces / items
- Colorless
- Water resistant
- Protect up to PH-13
- Food safety
- UV-protection

Safety & Health

Nanocoat International collaborates with TNO in the project NANO NEXT. In this project, all coatings have been tested for health risks.

Several tests have been done on test persons whom applied the coatings on their body using different methods and techniques. These tests observe how many Nano particles in the product are, how many Nano particles as a particle releases and whether these fine fabrics are harmful to humans.

NANO NEXT is a study of the Department of Safety & Health. The results of these tests are shared with Nanocoat International and are available on request.

Nanocoat International is approved by:
