Eberspaecher Marine Heaters:

Flexible solutions for cabin heating

- **Easy installation with marine specific installation kits**
- **Comfortable heating operation with the new EasyStart Web control unit**
- **Airtronic air heaters for rapid heating**
- **All-rounder - Hydronic water heaters**

Esslingen, 23 September 2016 – **Thermal management specialist Eberspaecher presents customized heating systems for sailing and motor boats of any size at the METSTRADE from 15 to 17 November 2016 in Amsterdam. A world first at stand 602 in hall 01: the new EasyStart Web control unit which allows users to access their heating system over the internet from anywhere in the world.**

Thermal management specialist Eberspaecher is presenting the highlight of its new operating elements generation in Amsterdam: EasyStart Web allows boating enthusiasts worldwide to easily control their heaters. Using the app, the heater can be started and programmed regardless of distance, as long as network coverage is available. Current performance data such as interior temperature, timer or operating mode are also available. The software and hardware are compatible with current operating systems, as well as Eberspaecher Hydronic and Airtronic predecessors.

The Eberspaecher marine heater product portfolio featured at METSTRADE serves a wide range of requirements and has an appropriate solution for a variety of boat types with heating power from 850 to 35,000 watts. Specific marine installation kits for air and water heaters including numerous practical accessories facilitate the installation. Eberspaecher demonstrates this unique advantage for boat builders and suppliers with two installation examples at the trade fair stand.

To meet varying requirements, Eberspaecher has two systems to choose from. The Airtronic air heater series is designed to meet the needs of owners who value an extremely rapid heating of the cabin. AIRTRONIC is also ideal for drying clothes and for the dehumidification of the cabin, especially in the quiet night operation mode. Practical air control elements enable the distribution of warm air exactly as needed. All Airtronic models can be quickly and easily retrofitted.

The water heater series Hydronic offers an all-round heating system for motor and sailing yachts: it not only evenly heats the cabin air, but also allows the heating of the service water, for example for a hot shower.
