

PERMATEEK[®]
THE ULTIMATE SYNTHETIC DECKING

LOOKING GOOD, FEELING GREAT

Transform your deck space

PERMATEEK marine decking is an environmentally friendly composite decking system that offers the robustness and good looks of teak but with far greater durability and ease of maintenance. It has a roughened surface that looks like natural grain and which is highly resistant to sun, rain and seawater. Non-slip wet or dry, Permateek is cost effective, stain resistant and simple to keep clean.

Your deck will be designed and hand crafted from synthetic teak planks, with the same attention to detail as a real teak deck. Our professionally trained craftsmen provide meticulous hand-finishing with impressive detailing around deck fittings and curves.

Permateek marine decking can be fitted to almost any surface including GRP, wood and steel. Its flexible nature allows it to be shaped or contoured with ease. Once fitted, Permateek will enhance the appearance and value of any craft whether it be a super yacht, motor cruiser, power boat, sports RIB, sailing yacht or dinghy.

THE RIGHT DECKING CHOICE

Holds its looks season after season

Not all synthetic marine decks are the same. Permateeek marine decking is a very high quality product, made using **only the finest quality virgin PVC materials. It is thermally welded, rather than glued, to form panels.**

Permateeek is one of the only major synthetic teak decking companies to have resisted the temptation to add light-weight fillers. Because we have kept to our proven formula, our product is stronger and more hard-wearing. It will hold its colour and keep its grain longer and be more resistant to wear, tear, knocks and scratches. It will not fade, crack, warp or shrink in the elements, requiring only minimal maintenance (washing) to keep it looking good season after season.

THE BENEFITS OF PERMATEEEK

- **Longevity** – Built from planks of UV stabilised PVC
- **Low Maintenance** – No regular wood sanding and oiling required - simply brush with soapy water
- **Limited Down Time** – One day to pattern, and one day to fit! All other work is conducted in our workshops
- **Price** – Favourable pricing compared to real teak decking
- **Quality Craftsmanship** – High quality fabrication process of thermal welding to form deck panels.

“

*Permateek doesn't discolour,
it's easy to clean, it's pleasing
to the eye and I've never had
any problems at all*

”

EVEN MORE COLOURS ON DECK

Multi-colour and lightweight versions

PERMATEEK MULTI-COLOUR

Multi-colour is a popular addition to the Permateek range. Each plank is slightly different in colour to the one next to it, giving an even more natural teak effect deck. Multi-colour is offered in the following versions:

Dark

Bright

Weathered

PERMATEEK LIGHT

For situations where weight is an issue, we offer Permateek Light – a lighter, cooler decking option using a proven formula.

- Over 30% lighter in weight than our standard range
- Cools more quickly than the standard range
- Same proven formula for over 15 years

WHAT MAKES PERMATEEK BETTER?

More reasons to choose Permateek

- Embossed backing for exceptional adhesion
- Caulking line runs through the plank top to bottom
- 100% virgin PVC
- Proven formula
- Wood grain texture and effect looks like real teak
- Great non-slip qualities

SYNTHETIC DECKING AND HEAT

For those concerned about synthetic decks and how hot they get in direct sunlight, the truth is all synthetic decks, just like real teak, will get hot. Permateek, in its original form, has always been among the cooler choices on offer and the lighter the deck colour you choose, the cooler it will be. That said, if it is a cool deck you require, you just can't beat white Fibreglass. If, however, like thousands of others, you desire the good looks of a teak deck with all the benefits of a synthetic alternative, then Permateek is an obvious choice.
