### **INTRODUCING THE NEW DOUBLE STACK HIGH CAPACITY FRESHWATER PUMP SYSTEM FROM WHALE**

Whale is a leader in marine water and waste systems. Key product lines include award winning fresh, bilge and waste water management pumps, plumbing and accessories.

*'Directly responding to the trend of increased system complexity and higher water flow requirements, Whale has launched the new Double Stack High Capacity Freshwater Pump System. It is designed to efficiently deliver smooth water flow in vessels with up to 8 outlets' said Simon McFarland, Product Manager for Whale. "The new double stack pump system ensures fast installation and delivers smooth even water flow. Operating noise is also reduced by minimizing pump cycling and vibration.'*

#### **EFFICIENT PUMP CONTROL**

The system combines 2 pumps (available in either 24 or 32 litre capacity) and a 2 litre accumulator tank to ensure a smooth even flow of freshwater to multiple outlets. The double stack uses system pressure to efficiently control the pumps and prevent cycling. The twin pump system works by the first pump activating when low flow rate is required or both pumps activating only when high flow rate is needed. The system also features industrial grade pressure switches which are ignition protected and require no relays.

#### **EASE OF INSTALLATION- PRE-ASSEMBLED KIT IDEAL FOR NEW BUILDS OR RETRO-FIT.**

The pre-assembled kit is fast to install and includes 2 integrated high performance pumps, 2 robust industrial grade external pressure switches, 2 strainers, accumulator tank with an easy to install mounting bracket and plumbing connections all in a single plug and play solution. The small footprint is ideal for installation in tight spaces.

-MORE-

Boat builders are able to purchase Whale's new Double Stack High Capacity Freshwater System now. Contact Whale for more information or visit: [www.whalepumps.com/marine](http://www.whalepumps.com/marine)

#### **About Whale**

Whale, based in Bangor Northern Ireland, has more than 70 years in marine water and waste systems, designing advanced water systems to help boaters enjoy their time on board.

#### **Whale Overview - Quality Innovation, Service**

Whale is a leader in marine water and waste systems. The designs, rapid prototypes, manufactures and markets water products globally. Product lines include fresh, bilge and waste water management systems, water heaters and accessories. The Whale in-house design team builds on decades of experience and work in collaboration with sail and power boat builders all over the world to deliver a continual stream of innovation marine products. Whale Headquarters is based in Bangor Northern Ireland.
