# CL HYBRID

## CONTINUOUS CABLE WITH SOLID + FLEX SECTIONS

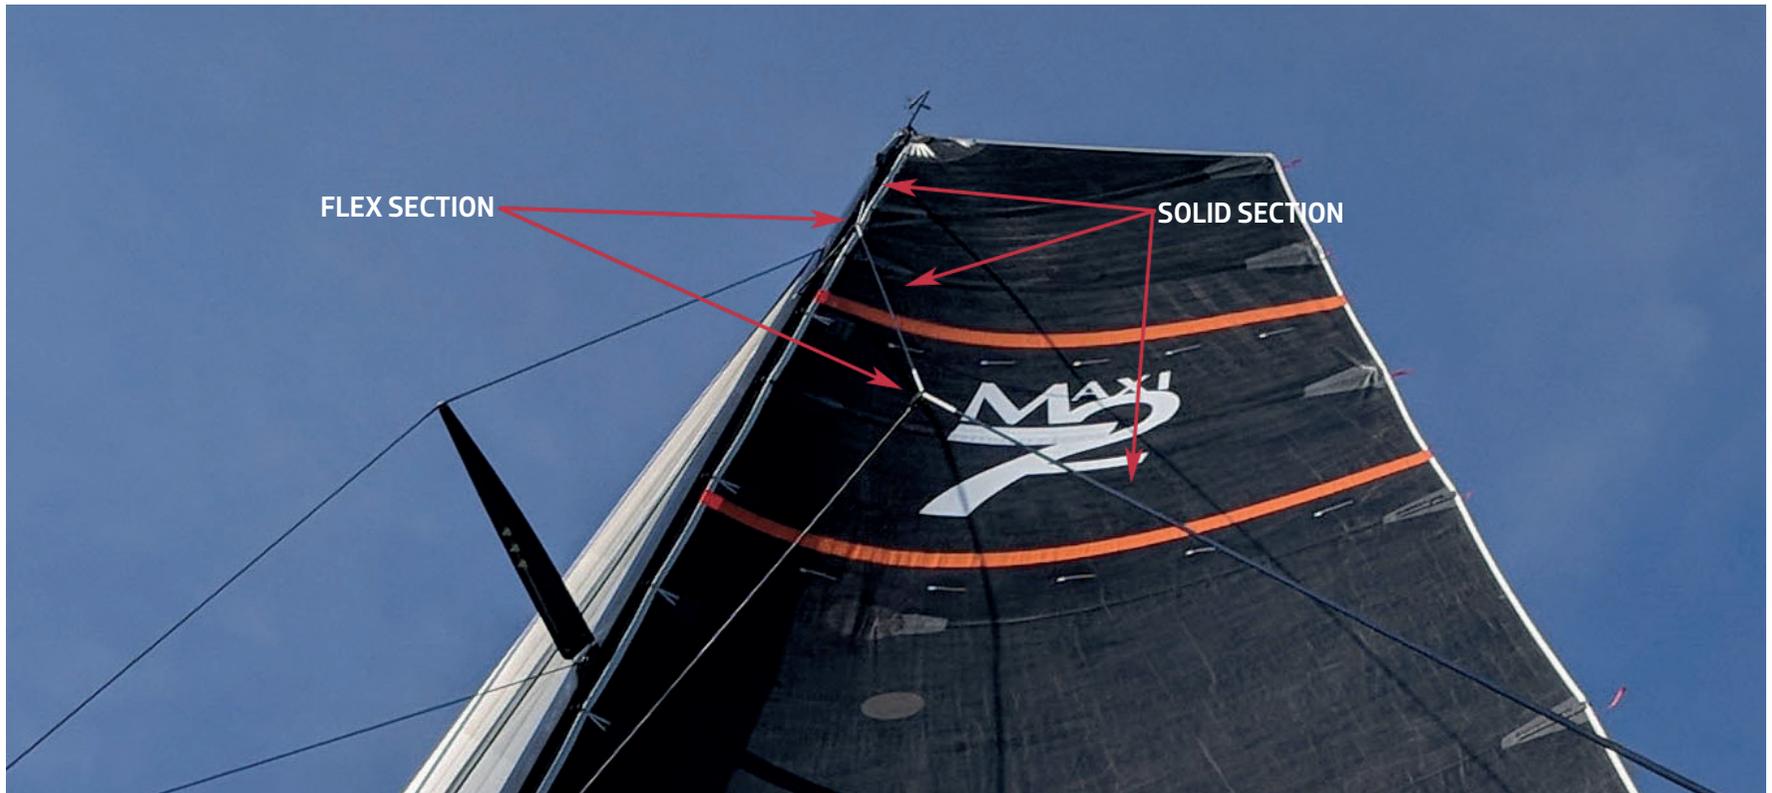

MADE IN SWITZERLAND  
SINCE 2000

GL CERTIFIED  
AS 9100D AEROSPACE & DEFENCE CERTIFIED

*Carbo*  
**Link**

# CL HYBRID

## #1

### INNOVATION

- Flexible in the required places
- Solid carbon over the remaining length
- One continuous full length cable - no joins along the full length
  
- First introduced on Version 5 Cup boats
- The technology has evolved and now installed on Maxi 72's, offshore monohulls and superyachts

## #2

### FLEXIBLE SECTION

- Carbon tapes bundled into individual rods locally at the required locations
- Consolidated with a dyneema cover for chafe protection
- Transition between flex & solid is engineered to sustain all bending angles
- Possible to fix deflector taco within flex section for optimum loading

## #3

### SOLID SECTION

- CL SOLID or CL ELLIPSE rigging
- Same construction process as all Carbo-Link rigging
- Lightweight, toughened resin, optimised stiffness
- Fully integrated fittings for low windage, lightweight interfaces
- Lashing, pin, barrel pin, spherical terminations most widely used
- Possible to shape the solid section into any profile for reduced windage
