

# Stainless Steel Nozzles with increased corrosion resistance

Ultra Fog now offers a higher corrosion resistant version of all nozzle types. To increase their durability, our nozzles are passivated, according to the special method for optimal corrosion resistance.

Ultra Fog uses high quality materials in all the nozzles. The parts are machined from solid bars using with precision cnc-machines. Moreover, nozzle tools and spare parts are available for maintenance. **All stainless steel parts are made from steel manufactured and passivated by SANDVIK.**

The nozzles are designed for use in high saline areas such as coastal or offshore environments and also for areas with high air condensation or pollution.

Examples of use: **balcony, mooring area, pool, sauna and wellness areas.**
