Our Vision

“We believe that our first responsibility is to the customer who uses our products.

It is the daily attention of our team that makes our steel components functional, elegant, capable of satisfying specific client requirements.

Our ability of maintaining all aspects of production in Italy enables us to meticulously control the entire development process.”

CHRISTOPHER BIZZIO
CEO

MARCELLO IACOMELLI
CHAIRMAN

Idea

It all begins from an idea and we can transform your ideas into reality.

Production

The manufacturing process follows phases of work in the hands of technicians, welders, and skilled workers:

cutting - bending - welding - grinding - polishing - finishing - assembling.

IACOMELLI's highly specialized staff in metal welding and polishing is recognized with WPS and PQR certifications by Lloyd's Register.

Design

The design process is assigned to the expertise of engineers within the company who use sophisticated software.

The production process is divided into 3 main phases:

- Understanding the customer's needs
- Product study and engineering
- Manufacturing

SHIPBUILDING

Since 1975 **IACOMELLI** has been a partner to naval shipyards both in Italy and abroad, with the manufacturing of hatches, vents, components, and accessories for yachts.

Exquisite metal carpentry for the shipbuilding industry is the result of the expertise of engineers, technicians, and welders.

The transformation of stainless steel and aluminium sheets into products are the hallmarks of our work.

MORE INFO ONLINE

Hatches, Doors & Vents

The IACOMELLI nautical hatches, doors and vents are available in different types and dimensions or tailored to THE customer's needs.

Whether curved or flat, vertical, or flush, with teak-ready vents, the naval hatches and doors are made state of the art thanks to continuous research, study of materials and careful supervision at all stages of manufacturing process, from "design-to-production-to-quality control".

All IACOMELLI steel engineering hatches and doors can be manual, hydraulic or electric.

Vents are the result of an optimal processing of steel by our skilled welders.

Accessories

Thanks to the attention paid to the smallest detail in how accessories are manufactured, the final product is a combination of functionality and aesthetics.

Refit & Yacht repair

We bring our know-how of metal carpentry on board, to transform, improve and modernize any yacht.

PHARMA

Metal carpentry for the pharmaceutical industry is an activity that requires highly skilled work.

Stainless steel processing is the first step in obtaining products suitable for the pharmaceutical industry, given the high standards needed for the final product.

All our production is based on the design of the customer, for this reason all our products are customized and personalized.

From cutting to bending, from welding to polishing, and finishing with assembly, it is the capabilities of our welders that make our products different from our competitors.

Among the pharmaceutical carpentry elements, we can manufacture:

- Frames
- Hot rooms
- Isolators
- Pipes
- Mixers
- White rooms, bins and components for the pharmaceutical production line.

MORE INFO ONLINE

FOOD

Metal carpentry for the food industry is an activity that we established thanks to the high-level expertise of our staff of engineers, welders, and skilled workers.

Starting from the technical design, going from laser cutting, to folding, to welding entrusted to skilled hands, stainless steel is processed and moulded and polished to create new structures that will become special, completely customized, and unique machinery.

The stainless-steel production for the food industry ranges in many types of machinery and components, constantly updated:

Frames - stairs - washing-rows - masks - metal structures shelves - tanks - scrap collection - flooring - pliers - trolleys - components for pasta machinery.

ARCHITECTURE

Working with stainless steel allows you to enter many areas and venture into the creation of carpentry for the architectural sector, giving character and personality to various settings.

At **IACOMELLI** we love to collaborate with architects and artists to help them transform and idea into a concrete product

Company

IACOMELLI was founded in 1958 as a metalworking company specializing in the processing of stainless steel and aluminium.

The continuous search for innovation and the attention to new technologies, combined with decades of experience, are our strongest point, giving us the opportunity to develop a wide range of custom products for different industrial sectors:

Shipbuilding

Pharmaceutical

Food

Architectural

A balanced team is at the base of every result

Various departments working together, where each person, contributes with his/her specific skill is the most important factor the success of the project.

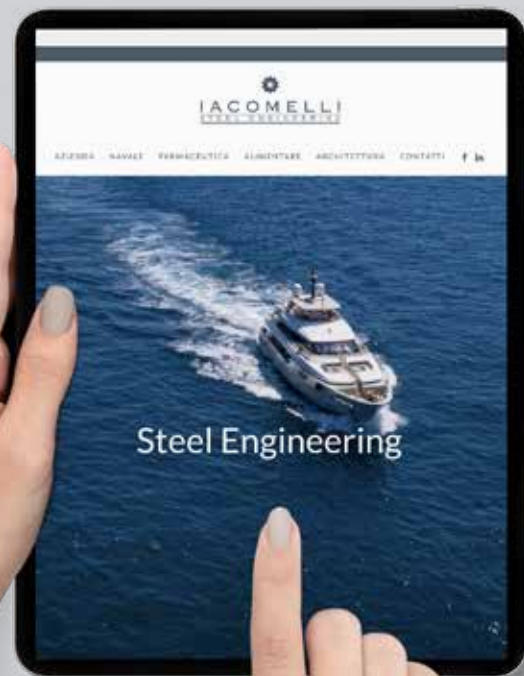

This is IACOMELLI.
