

Q-SEP®

HOLLOW FIBER ULTRAFILTRATION

About QUA®

QUA[®] is a manufacturer of advanced membrane products for water, wastewater and water reuse applications. For over a decade, extensive research and development activities have resulted in a range of cutting edge membrane products such as hollow fiber ultrafiltration modules (**Q-SEP**[®]) and fractional electrodeionization stacks (**FEDI**[®]).

The **Q-SEP**[®] ultrafiltration fibers and modules are manufactured in a state-of-the-art, environmentally-controlled manufacturing facility with continuous online monitoring to maintain consistent quality.

About Ultrafiltration

Ultrafiltration (UF) is a membrane process used to remove suspended solids, colloidal matter, high molecular-weight substances, and bacteria and viruses from various feed water sources. UF membranes can achieve a low and consistent silt density index (SDI) and are often used as pretreatment for reverse osmosis using surface water, seawater and biologically treated wastewater as feed source. The **Q-SEP**® UF membranes incorporate high-strength, hollow fibers that deliver superior performance without the risk of fiber breaks. The **Q-SEP**® UF membranes are made from a hydrophilic polyether sulfone (PES) material with excellent low fouling characteristics. These hollow fiber membranes operate under a pressurized inside-out flow configuration for superior performance.

The **Q-SEP**® hollow fiber UF membranes offer reliable removal of turbidity, microorganisms, and viruses. Turbidity can be reduced to less than 0.05 NTU. Typically, a 5-log removal for bacteria, giardia and cryptosporidium, while a 4-log removal for viruses, can be achieved.

The **Q-SEP**[®] modules contain an advanced UF fiber, prepared by an innovative cloud point precipitation method (patent pending). This method ensures a very uniform pore size distribution and high pore density in the membrane. As a result, the product water quality from the **Q-SEP**[®] modules is significantly better than the quality from conventional UF modules at a very low operating pressure.

The fibers in the **Q-SEP**[®] module are held firmly in place, which reduces the stress on the fibers even at high flow velocities. Uniform fiber packing limits the pressure drop variation within the module and prevents localized high fouling conditions. The unique end cap sealing design allows for high pressure operation and ease of assembly.

The **Q-SEP**[®] UF modules can be used as dead-end filtration or in cross flow mode. The membranes are available with 0.8 mm ID fibers, suitable for feed water with low turbidity and 1.2 mm ID fibers, suitable to treat water with higher turbidity.

Module Specifications

Module Details

Parameter Description / Information

Configuration Self encapsulated hollow fiber ultrafiltration

membrane module (inside-out)

Operating Mode Dead-end or Cross flow, Backwashable

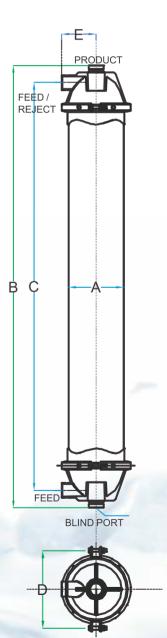

Module mounting Vertical
Nominal Membrane pore size 0.02 micron

Q-SEP[®] Modules - 0.8 mm bore size

Product Data		Q-SEP [®] 4508	Q-SEP [®] 6008
Membrane area	m^2 / ft^2	45 / 484	60 / 645
Filtrate flow rate minimum	m³/hr / gpm	2.25 / 9.9	3.0 / 13.2
Filtrate flow rate maximum	m³/hr / gpm	6.75 / 29.7	9.00 / 39.6
Fiber Inside diameter	mm / inch	0.8 / 0.03	0.8 / 0.03
Fiber Outside diamter	mm / inch	1.2 /0.05	1.2 /0.05
Module Dimensions			
Diameter (A)	mm / inch	225 / 8.85	225 / 8.85
Length – with end cap (B)	mm / inch	1809 / 71.23	2265 / 89.15
Length – feed connections (C)	mm / inch	1666 / 65.59	2116 / 83.31
Distance – width (D)	mm / inch	316 / 12.44	346 / 13.62
Distance – feed to center (E)	mm / inch	140 / 5.51	140 / 5.51
Module Weight	kg / lbs	47.2 / 103.5	53 / 116.2

Q-SEP[®] Modules - 1.2 mm bore size

Product Data		Q-SEP [®] 3412	Q-SEP [®] 4512
Membrane area	m^2 / ft^2	34 / 365	45 / 484
Filtrate flow rate minimum	m³/hr / gpm	1.7 / 7.48	2.25 / 9.9
Filtrate flow rate maximum	m³/hr / gpm	5.1 / 22.45	6.75 / 29.7
Inside diameter	mm / inch	1.2 / 0.047	1.2 / 0.047
Outside diamter	mm / inch	1.9 / 0.08	1.9 / 0.08
Module Dimensions			
Diameter (A)	mm / inch	225 / 8.85	225 / 8.85
Length – with end cap (B)	mm / inch	1809 / 71.23	2265 / 89.15
Length – feed connections (C)	mm / inch	1666 / 65.59	2116 / 83.31
Distance – width (D)	mm / inch	316 / 12.44	346 / 13.62
Distance – feed to center (E)	mm / inch	140 / 5.51	140 / 5.51
Module Weight	kg / lbs	52 / 114	58.4 / 128

Technical Information

Operational Instructions

Filtrate flux range 50 to 150 l/m²h (30 to 90 gfd)

Maximum feed pressure 5.0 bar (70 psi)

Trans-membrane pressure 0.3 to 1.4 bar (5 to 20 psi)

pH range 2 to 12

Maximum instantaneous chlorine tolerance 200 ppm Maximum operating temperature 45°C (113°F)

Maximum feed turbidity 0.8 mm ID: 25 NTU

1.2 mm ID: 50 NTU

Backwash flux range 150 to 300 l/m²h (90 to 180 gfd) Backwash feed pressure 0.7 to 2.1 bar (10 to 30 psi)

Backwash frequency & duration Every 15 - 45 minutes for 30 - 60 seconds

Chemically Enhanced Backwash

Estimated frequency Every 1 to 10 days of operation (depending upon feedwater

conditions)

Duration 10 to 20 minutes

CEB chemicals NaOCl (100 - 200 ppm), NaOH (pH: 11-12), HCl (pH: 2-3),

H₂O₂, Citric acid.

Module Characteristics

Membrane material Hydrophilic PES

Housing material UPVC End cap material GRP

Nozzles size 2" Victaulic
