

SMARTPARK

- An efficient solution for the administration of digital permits

Efficient handling of digital permits

Smartpark replaces the need for all kinds of physical parking permits. Smartpark is very flexible and allows you to define different parking areas and set the rules for these, for example which tariffs shall apply and when, restrictions on the use of the permits, etc. The possibilities are endless.

When issuing permits, the system automatically validates and informs you whether or not the person is entitled to a permit. The permit is available for enforcement immediately after registration.

It is up to you whether you wish to charge for the parking permit or simply issue it as a service to the customer.

The permits are fully traceable and every change and the time that it occurred can be followed in Smartpark. Smartpark gives you access to the complete history.

Various ways of using the service

Smartpark can be used for residential parking, commercial parking, personnel parking and guest parking. Below are a few examples.

Residential parking:

To solve parking in residential areas, Cale provides digital residential permits that can be applied and paid for online. Approval can be done automatically by verifying the address of the resident, and the permit becomes valid immediately after the online payment has been completed.

There is no longer any need for manual registration or the issuing of paper permits to be collected in person or sent via post. All fraudulent use of permits will be eliminated.

Commercial parking:

Many companies performing different tasks in the city, for example construction or delivery companies, need a parking permit to be able to do their job. Smartpark helps you to handle these permits efficiently. Once approved and valid payment has been received, the registered permit is immediately viewable in Smartpark and available for enforcement.

The user can easily change the vehicle to which the permit applies via a mobile service.

You get what you pay for

Smartpark offers three different licences (basic, professional and premium) and various packages of functionality are available depending on which licence you choose. You can always upgrade later, if the need arises.

Useful features include: e-service including web payment, an invoicing service, case management, external registration, and information regarding disabled permits that have been blocked.

Designed to be adaptable

We want you to get the most benefit possible from using our solutions. An example of this is that, as well as standardised but very adaptable cloud services, we also offer the possibility to customise the system. We can thus meet the needs of every individual customer.

1 + 1 = 3

Great synergy benefits are achieved when you combine the use of Smartpark with other parts of Cale's digital parking offering, and integrate them all into the one management system.

Being able to see every event regarding your payment terminals and mobile transactions, and to obtain an overview of your enforcement operation online and in real time increases your efficiency tremendously.

Overview of the benefits

- Time savings and less administration with automated permit handling
- Immediate availability of permits for enforcement
- No need to handle physical permits
- Full traceability
- Possibility for the customer to purchase permits online
- Possibility for the customer to change vehicle and/or cards via a mobile service
- Copied/fake permits eliminated

Some of the features described may be optional. Due to continual product development, specifications are subject to change without notice.
