## Living the yacht with a simple touch

**"Animate a curtain to let the light filter. Enjoy relax at the desired temperature, watching a movie on demand, or simply drinking a sophisticated and refreshing cocktail only by touching the screen... Search the absolute silence falling asleep in a bed protected by a futuristic sound-proof bubble..."**

The dream becomes reality with Videoworks Spa, which for more than 20 years has been building sophisticated systems, audio / video, entertainment, internal and external communications and advanced home automation. Discrete systems where everything is designed at four hands with the owner and where each edge technology is combined with the demands of space and aesthetics of the yacht. Wiring included.

## Videoworks Marine Services: Control software with client ITW mode

The control software is a client app based on the framework of development ITW Mode which allows the IPAD become a real «Smart Remote Control» . It interfaces with the main control systems on the market.

Thanks to the ITW Mode App, which acts as a «container» that can be «filled» with various functions, the control software allows for example to display on the IPAD Maps NMEA information or real time videos from CCTV...

With the application you can also CALL THE STAFF (ex. Waiters) with the proper button, manage advances HOTEL APPLICATIONS, see the WEBSITES of international newspapers.

Having a flexible system such as ITW Mode also allows you to work on protocols with control systems to optimize the response time and include within app third parties providing suitable mechanism of APP entry/exit.

The application is multi cab. Once you define the configuration of the APP, i.e. the list of features, it is saved and can be loaded in different IPADs on board.

In case of breakage of the IPAD it can be immediately restored by downloading the ITW Mode APP from the Apple Store.

## MyConcierge

This brand new Videoworks APP realizes the dream of having a high level hotel service on board, wherever you are. Order a refreshing cocktail or a snack from the menu, have their own newspaper at hand, waking up with the music chosen and lighting scenes you want, access your TV channels or favorite music just by touching the touch panel. And you can also set the mode cabin «don't disturb» or «available».

## MyInfos The new and advanced information system for yacht

Developed in HTML5 for easy integration with the Apple TV, MyInfos is the key part of the entertainment-info-domotic system on board of the yacht. The system allows you to perform various tasks and view the information you need on any monitor with a simple touch of a Crestron or AMX display. In this way the most demanding services are combined and *displayed anywhere, anytime and easily*: CCTV / CHARTING / GOOGLE EARTH / NMEA / WEATHER / COMMUNICATION FROM THE CAPTAIN / GOOGLE EARTH 3D

## MyCerberus

The «MyCerberus» exclusive service allows to intervene immediately in case of faults that may occur in the installed systems, even before the customer might notice or detect them. MyCerberus sends malfunction's notification alerts directly to the Videoworks helpdesk in real time, allowing Engineers to take immediate action remotely. This innovative and efficient service offered by Videoworks breaks down then all the delays and possible nuisance to the users who will receive instead immediate assistance. The fact that it is a software product developed in-house ensures a speedy integration with new products and new diagnostic technologies.

## MyConnections

It's a web local APP based on a CISCO Router that allows you to manage 4 types of internet connections on board. In a simple and secure way: VSAT / FLEET BROADBAND / UMTS / WI-FI. The access of the users (Owners, Guests, Captain, Crew) to the network is controlled by the DIRECTOR OF THE APPLICATION. The correct user login is guaranteed by: PASSWORD / UNIQUE NUMBER OF THE DEVICE. THE DIRECTOR OF THE APPLICATION can: Create and cancel the users. Create scenarios i.e. «Owner at work» which immediately determines who can and can not access the Internet.

## MyScreen Video streaming on tablet and smartphone

A solution that allows you to view streaming video on tablet or smartphone. The video to be transmitted can be from any type of channel: Satellite, TV, DVD, Decoder... And thanks to the HTTP protocol segmented can be displayed in high definition on iOS devices, Android and Windows 8. It's also possible to transmit the video on multiple devices **SIMULTANEOUSLY**.
