PERFIX®

safe and secure

safe, secure and elegant

PERFIX is the only secure connection without using any protruding parts. Born out of pure frustration over these protruding parts sticking out on deck of the boat. PERFIX is designed for fixing covers on boats, but nowadays found in all kinds of applications where safety or comfort is an issue.

SAFE

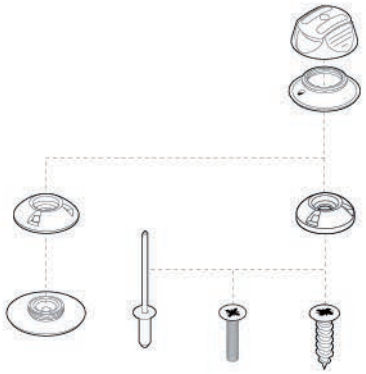
PERFIX does not involve protruding pins, sharp parts or other hazardous obstacles on deck. PERFIX has smooth, round fixing points which prevent injury, cloth damage or snagged ropes and cords.

SECURE

A textile fasteners that won't pop loose like that. Not even at 500N. A simple lift of the cap will release.

CORROSION FREE

Each individual part of PERFIX is made of the highest quality plastic and the spring is made of the best 316 stainless steel, so PERFIX doesn't contain fragile parts.



ELEGANT LOOKS

The PERFIX system consists of buttons and receivers. For the receiver-part there is a version for fixed surface (using screws etc.) and one for fabric. PERFIX-parts are sold separately and are available in different colours. In this way, several combinations make it able to match deck and cover colour. Special colours on request.
