

Stockholm, Sept. 24th, 2019

Constant flow valves rated for as little as 0,15 L/min to save more water and ACS-certificate for potable water applications are highlights from Bertfelt Teknik at Aquatech!

Bertfelt Teknik, the leading manufacturer of constant flow valves, is for the 4th time exhibiting at Aquatech Amsterdam 2019. Over 1,000 exhibitors and 25,000 water industry professionals are expected to attend Aquatech Amsterdam from November 5–8. Bertfelt Teknik is proud to announce the launch of a new range of constant flow valves with flow rates starting from as low as 0,15 L/min and the obtention of ACS certificate for potable water applications.

"Aquatech is an important platform for our customers in the water industry from all over Europe. Bertfelt Teknik has been exhibiting here since 2013 and we have seen the show evolving and growing over the years. We have clearly seen a stronger interest from our customers to visit the show and learn more about water applications. We want to help our customers in improving their water related processes and that is why we have developed a range of constant flow valves limiting the flow to only 0,15 L/min." said Mr. Agne Bogren, CEO of Bertfelt Teknik.

Save even more water with BT-Maric Constant Flow Valves

In many applications there is a need to have the lowest possible flow rate. For long the lowest flow rate has been 0,4 L/min. In the effort to help the customers to

optimize their flow rate and save water, Bertfelt Teknik has now added 5 new flow rates below 0,4 L/min: 0,15 L/min, 0,2 L/min, 0,25 L/min, 0,3 L/min as well as 0,35 L/min. All with the standard accuracy of nominal flow rate +/- 10% over the whole pressure drop range 1,4-10 Bar.

Obtention of potable water certificate: ACS

Bertfelt Teknik AB has obtained a new certificate for its constant flow valve range: ACS, Attestation de Conformité Sanitaire. The "Attestation de Conformité Sanitaire" (ACS) is the French potable water certification which demonstrates the suitability of products that come into contact with water intended for human consumption.

will

Thanks to this approval, Bertfelt Teknik can supply its high-quality constant flow valves, System Maric for applications requiring potable water certificate, not only in France but also in other European countries through the principle of mutual recognition that stems from Regulation (EC) No 764/2008.

Mutual recognition ensures market access for products that are not subject to EU harmonisation. It guarantees that any product lawfully sold in one EU country can be sold in another. This is possible even if the product does not fully comply with the technical rules of the other country.
